Summary

I am an emerging and dedicated Front-end developer with **2 year of experience**. I have hands-on experience with modern frameworks and state management tools such as React.js, Next.js, Redux, Redux Toolkit, Zustand, and TypeScript in both React.js and Next.js environments.

Experience

Effect (Frontend developer)

08.2024 – 05.2025

- Developed and optimized the full frontend of the Telegram bot [@effect_mehnat_zamonaviykasb_bot](#) using React.js, building a fully functional, high-performance interface by applying SOLID architecture, custom hooks, and optimization techniques like useMemo, useCallback, and React.memo; conducted thorough code reviews, performed deep code optimization, and collaborated on UI/UX design and backend integration to deliver a clean, scalable, and production-ready system
- Developed and optimized [“Brand Beauty”](#), a modern e-commerce platform for beauty products built with React.js, Redux Toolkit, and Axios, featuring advanced functionalities such as search, filtering, and add-to-cart; implemented a custom debounce hook for efficient search performance, optimized API calls to trigger only on page transitions to reduce memory load, ensured clean architecture and prevented memory leaks through proper resource management, and added auth animations and smooth UI transitions for a seamless and polished user experience.
- Developed and optimized a “Catalog” project for the ice-cream brand on [akmedov.uz](#), focusing heavily on UI/UX design and frontend performance: built responsive, visually engaging catalog components, applied React.js (or relevant stack) with component-level optimizations: memoization, minimal rerenders, ensured clean architecture, efficient data fetching, and smooth UI interactions to deliver a high-quality, performance-driven user interface.
- Developed and optimized “Auto Vehicle Operation Express” : [autovehicleoperationexpress.com](#), a custom logistics management platform designed for a transportation company, featuring automated request submission via Google Forms and optimized financial tracking modules; implemented a clean, scalable architecture with well-structured React components, optimized performance across complex data flows, and ensured smooth, reliable operations for both client and internal users.

Getter IT Innovation company - Intern

04.2024 – 07.2024

- Built and refined [“Inhouse Getter”](#), a feature-rich e-commerce platform for kitchenware products developed with React.js, Zustand. Focused on delivering high responsiveness and efficiency by applying custom debounce hooks for search optimization, managing state with lightweight and scalable architecture, and reducing API load through smart request handling. Integrated authentication animations, ensured clean, leak-free code, and implemented smooth UI/UX transitions for a fast and engaging shopping experience.

Skills

Technologies/Frameworks: JavaScript, ReactJs, NextJs, Tailwind CSS, Bootstrap, MUI, Ant Design, Framer Motion, Trillo, Redux, Redux-Toolkit, HTML5, CSS3, Zustand, React-hooks, Git.

Languages: Uzbek (Native Speaker), Russian (Intermediate).

Education

Tashkent State University of Transport (Engineer)

08.2018 — 08.2022

Najot Talim (Frontend, ReactJs)

09.2023 — 04.2024
